

## **Windows 10**

### **Edge Browser opens many web sites on Startup**

When you start Edge Browser, you may find that it opens all the tabs you were last viewing.

This can be quite annoying but is easy to fix.

If you sign-out of Windows or shut down your computer while Edge is open, the next time you Sign-in d start Edge, it will think that you want to continue your previous session so it will open all the tabs that were then open.

To stop this behaviour, make sure that you close Edge before you Sign-out or shut down your computer, then it will not open all the tabs.
