

Windows 10

Help! My Start menu is full screen and my apps only open full screen and can't be resized

Somehow you have switched on Tablet Mode! All you need to do is turn Tablet mode off. There are two ways of doing this:

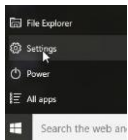

Using the Notifications window

Click Notifications icon  (bottom left of the Task bar), click Tablet mode  to turn it off.

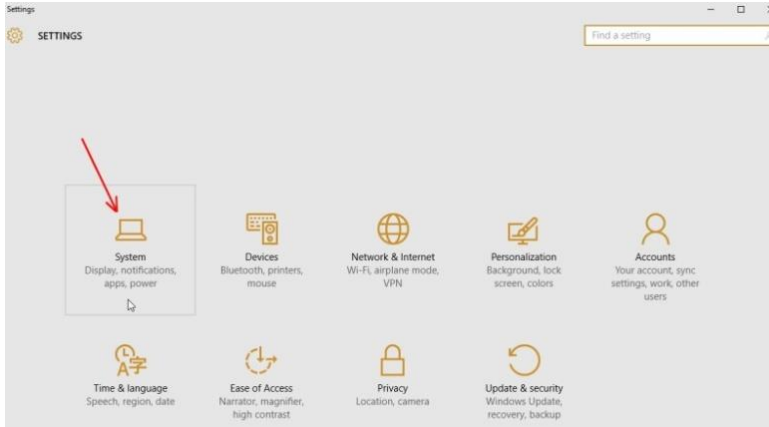

Using Settings

Click on Start > Settings

In the Settings window, click System

Click Tablet mode and change the setting
