

Windows 10 Hints & Tips—Slide Shows

The Photo app in Windows 10 is very basic. It can play slide shows but only at a fixed speed. There is a simple way of displaying a slide show where three speed options are available. You also have control over the display order.

Open *File Explorer* and navigate to the folder containing the photos you want in the slide show. In this example we have some photos in a folder called *Our Meeting*.

Open the folder to display the photos. Then click *View* then open the *Group by* drop-down box and choose the option you want. In this example we have chosen *Date created*

Now start the slide show – click on *Manage* then Slide show. The Slide show will start full screen.

Anytime during the slide show, RIGHT click on the screen to see the controls. Use this to set the speed to slow, medium fast, or pause, etc.
