

Uninstall unwanted apps

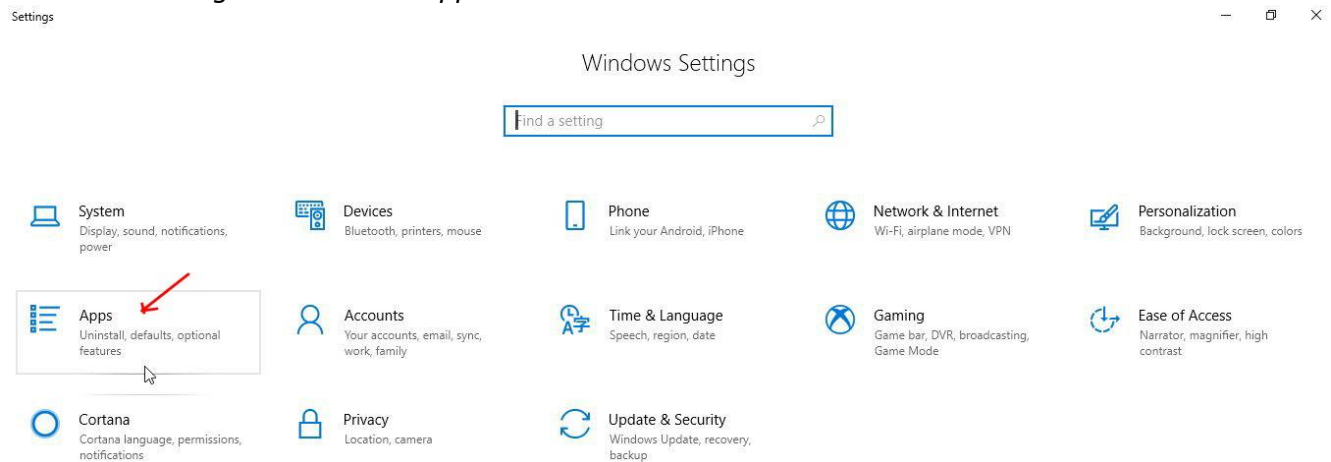

Over the years you may have installed many apps. You can go through the list and remove any that installed but you no longer use.

Most programs cannot be deleted by just deleting the application folder on the main disk drive. You have to get the system to uninstall an app, so that it is properly done.

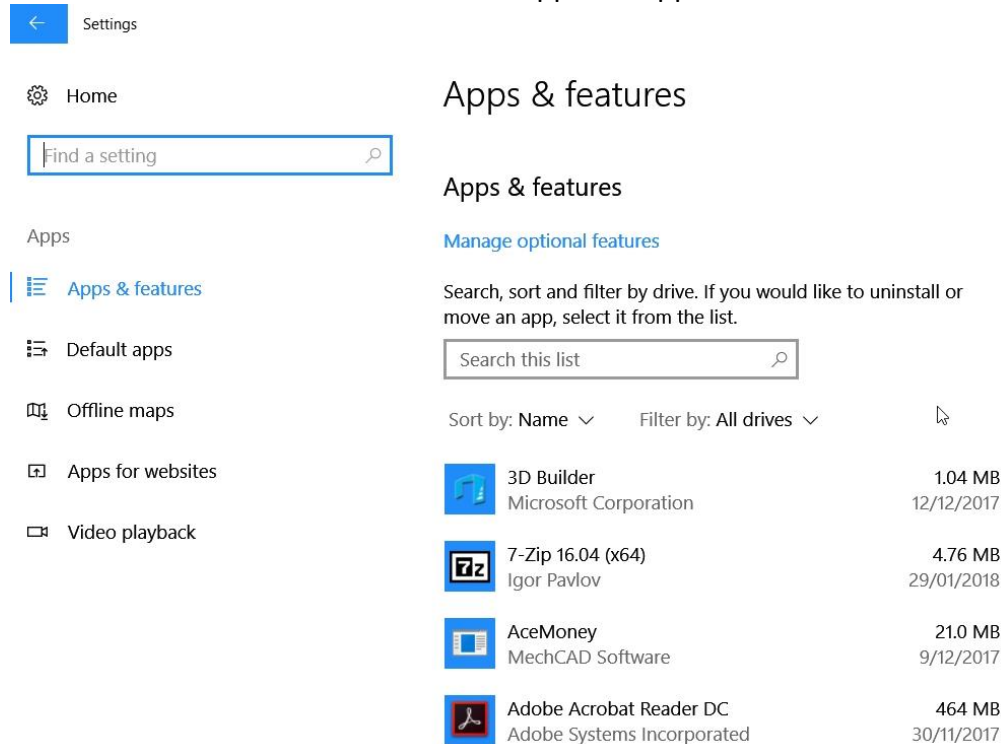

Be careful not to uninstall important apps that your system needs to operate correctly, eg:

- Apps from Microsoft Corporation
- Apps installed by your computer manufacturer
- Other apps relating to system such as Intel, Realtec, AMD, and the like.

Go *Start > Settings* then click on *Apps*

After a few seconds the list of installed apps will appear

In this case I want to remove 7-Zip – click on 7-Zip and click Uninstall

	7-Zip 16.04 (x64) Igor Pavlov 16.04	4.76 MB 29/01/2018
